

## Commercial Solutions Division **3M<sup>™</sup> Scotchcal<sup>™</sup> Graphic Film** Series 3650 **3M<sup>™</sup> Scotchcal<sup>™</sup> Graphic Film**

Series IJ3650

t 3M<sup>™</sup> Scotchcal<sup>™</sup> Graphic Film Series 3650 and 3M<sup>™</sup> Scotchcal<sup>™</sup> Graphic Film Series IJ3650 offer great versatility for indoor and outdoor signs and markings for commercial and industrial applications.

## Product Description

Graphics produced will withstand severe weather and handling conditions as well as occasional spills of petroleum products if protected by selected screen printable clear or overlaminate.

Product Line	Screen printing Inkjet printing	3650-X IJ3650-10	X = color code, opaque, glossy, permanent adhesive. Wide selection out of large color range. Special colors available on request. white, opaque, glossy, permanent adhesive (clear or grey).
Dreduct	These are indicative values	IJ3650-114	transparent, glossy, permanent adhesive.

Contact your 3M representative for a custom specification.

## Characteristics

Physical & Application	Material	cast vinyl			
	Surface finish	glossy			
	Thickness (film)	50 μm (0.05 mm)			
	Adhesive type	solvent acrylic; pressure-sensitive			
	Adhesive appearance	films available with clear and grey adhesive			
		inkjet print products:	g	rey, except for transparent versions	
	Liner	double-sided Polyethylene coated paper			
	Adhesion	approx. 20 N/25 mm		TM 1: 180° peel, substrate: glass; cond: 4 h 23°C/50%RH	
	Application method	wet or dry			
	Applied shrinkage	< 0.1 mm	FTM 14		
	Application temperature (minimum air and substrate)	e +16°C for flat surfaces		ces	
		+16°C	for curved to	o corrugated surfaces with and without rivets	
	Service temperature (after application)	-60°C to +107°C (not for extended periods of time at the extremes)			
	Surface type	flat to simple curved			
	Substrate type	aluminum, glass, PMMA, PC*, ABS, paint			
	*Might require drying with heat before use			se	
	Graphic removal	Fair to remove with heat and/or chemicals from supported substrates.			
		No liability is given for ease or speed of removal of any graphic. Pay attention to adequate air and substrate temperature.			

The values above are the results of illustrative lab test measurements and shall not be considered as a commitment from 3M.

Storage	Shelf life	Use within two years from the date of manufacture on the sealed original box. Use within one year after opening the box.			
	Storage conditions	+4°C to +40°C,	out of sunlight, origin	al container in clean and dry area.	
	The shelf life as defined a	oove remains an inc	licative and maximun	a data subject to many external and	d non-
	The shelf life as defined above remains an indicative and maximum data, subject to m controllable factors. It may never be interpreted as warranty.				
Flammability	Flammability standards are different from country to country. Ask your local 3M contact for details, please.				
Durability	The durabilities mentioned in the table below are the results of illustrative lab tests. The values show performance expected from these products, provided that the film will be processed and applied professionally according to 3M's recommendations. The durability statements do not constitute warranties of quality, life and characteristics. The durability of products is also influenced by: <ul> <li>the type of substrate and thorough preparation of the surface (with 3M™ Surface Preparation System)</li> <li>application procedures</li> </ul>				
	<ul> <li>environmental factors</li> </ul>				
	- the method and the fre	quency of cleaning			
	Unprocessed film The following durability data are given for unprocessed			n for unprocessed film only!	
	Exposure types	Vertical: face of		face of the graphic is ° from vertical.	
	Vertical outdoor exposure	Zone 1	Zone 2	Zone 3	
	white/black	8 years	7 years	6 years	
	colors	7 years	6 years	4 years	
	transparent	6 years	5 years	4 years	
	3M™ PerformanceIn addition, 3M provides a guarantee/warranty on a finished applied graphicGuarantee and MCS™within the framework of 3M™ Performance Guarantee and/or 3M™ MCS™Warrantywarranty programs.				
	For detailed graphic construction and application of Warranty periods, please see the Warranty matrice <u>3M Graphic Solutions/Warranties</u> . Visit <u>www.3mgraphics.com</u> for getting more detail graphic solutions.			ranty matrices and Warranty inform	nation on
Limitations of	3M specifically does not recommend or warrant the following uses, but please contact us to discuss your needs to recommend other products.				
End Uses					
Graphics applied to					
<ul> <li>- painted of unpainted rough wandbards, gypsum boards and wanpapers.</li> <li>- surfaces that are not clean and smooth.</li> </ul>					
	- surfaces with poor pair	s with poor paint to substrate adhesion.			
Graphic removal from					
Important Notice	- regular exposure or exposure without the recommended protecting overlaminate or clear to gasoline vapors or spills.				
	<ul> <li>3M Commercial Solutions products are not tested against automotive manufacturer specifications!</li> <li>Non vertical applications will have a significant decrease in durability!</li> </ul>				
	To avoid color variations all pieces of applied film of one colored area should be processed out of one lot     of material				

- To avoid color variations all pieces of applied film of one colored area should be processed out of one lot of material.

## Graphics Manufacturing

Graphic protection can improve the appearance, performance and durability of printed graphics. Any printed graphic exposed to abrasive conditions (including vehicles), harsh cleaners or chemicals must include graphic protection in order to be warranted.

	See instruction bulletin GPO 'graphic protection options' for further information about selection and use of protective overlaminates and printable clears.	
	> Product Bulletin Graphic Protection Options	
Shipping finished graphics	Flat, or rolled film side out on 130 mm (5 inch) or larger core. These methods help to prevent the liner from wrinkling or application tape, if used, from popping off.	
Converting Information Inkjet Printing	A too high total physical ink amount on the film results in media characteristic changes, inadequate drying, overlaminate lifting, and/or poor graphic performance. The maximum recommended total ink coverage for this film is 270%.	
Adequately Dry Graphics	Inadequate drying can result in graphic failure including curling, increased shrinkage and adhesion failure, which are not covered under any 3M warranty. Poorly dried film becomes soft and stretchy, and the adhesive becomes too aggressive.	
	Even if your printer has a dryer, it may not adequate dry latex and solvent inks in the short period of time it spends passing through the heater.	
Recommendations to improve the drying of solvent inks	Dry the graphic unrolled or at least as a loose wound roll standing upright. To further increase air circulation place the spooled film roll on a grid, and place a fan beneath the grid.	
	If you only spool open the film, adequate drying could still take a week, depending on the environment.	
	Build enough time into your process to ensure adequate drying of the graphic. 3M recommends at least a minimum drying time of 24 hrs before further processing. Test: Fold a piece of film with maximum ink laydown of the graphic onto itself. Apply 140 g/cm <sup>2</sup> for 15 minutes, release and check for effects like sticking or dull spots. These are clear indications that further curing or drying is needed.	
	Unlike solvent inks, spooling and letting latex printed graphics sit does not help to cure the ink, but does allow the graphic manufacturer to see if any oily spots are generated which may interfere with proper adhesion of overlaminates.	
	To ensure proper latex ink drying, use the following recommendations: <u>Media Presets</u> : HP media presets contain all the needed settings to print on a specific media. Download and use media presets from the following page: www.hp.com/go/mediasolutionslocator. <u>Environmental Conditions</u> : HP media presets have been specially designed and tested for each printer-media combination. Recommended environmental conditions: +20°C to +25°C, Humidity 40% - 60% RH	
Important notice for HP 831/871 and HP 881/891	The amount of ink printed is the main key for proper overlaminate adhesion. Select a media preset using 100% or less ink density.	
Post-processing of latex printed graphics immediately after printing	Latex inks should emerge from the printer fully dried. Post-air drying of a wet print will not enable drying, since latex ink drying requires that the dried ink is heated above the film formation temperature of the latex inside the printer. For immediately post-processing of latex printed graphics follow strictly the recommendations given above	
	(Section: Latex inks are different) and test the proper drying with the following performance tests:	
	<u>Visual Test:</u> Check the image immediately after printing. The sample should not be wet or sticky to the touch, or have an 'oily' feel when it emerges from the printer. <u>Rubbing Test:</u> After the visual inspection, wipe the printed sample with a white wet paper towel. Fully-dried ink should resist wiping and should not show any stains on the white cloth. If the ink is easily removed by wet	
	rubbing, then it is not dried. <u>Stacking Test:</u> In some cases, the top surface will appear dry after printing but within a few minutes ink may migrate to the surface leaving an oily aspect. To ensure proper drying, stack at least 12 sheets liner to printed side and let sit for one hour.	
	After 1 hour, remove the stack and check for "oily" stains, wet surfaces or glossiness changes on high ink laydown areas on each sheet. If any of these occur, then the ink is not properly dried.	
	If a sample is not properly dried on the printer, reprint the image under a condition that allows complete drying. Common improvement steps are: - Increasing the drying temperature in 5 degree steps.	
	<ul> <li>Increasing the number of passes to slow down printing.</li> <li>Reducing the amount of ink printed (media preset with lower ink densities).</li> </ul>	
Allow the converted graphic to build sufficient bond prior to application/installation	Give laminated samples time before applying them. The adhesion bond between the laminate and the printed base film will increase with time. 24 hours minimum for room temperature laminated graphics. 8 hours minimum for graphics laminated with heated rolls (one or two). Lamination temperature: +40°C to	

Converting Information	Formulations and processing conditions can affect ink durability. Refer to the 3M Product and Instruction Bulletins for your ink for limitations and proper usage. Graphic protection can improve the appearance, performance and durability of your graphic.		
Screen Printing	A clear coat also prevents chalking on unprinted films. Use equipment designed to handle high viscosity materials and make sure the coating is evenly applied to the specifications given in the clear's Instruction Bulletin.		
Abrasion and Loss of Gloss			
Application	See product bulletin ATR 'application tape recommendations' for information about selection and use of suitable application tapes for this product, please.		
	Refer to Instruction Bulletin 5.1 'select and prepare substrates for graphic application', for general application information.		
	≥Instruction Bulletin 5.1 'select and prepare substrates	for graphic application'<	
Maintenance and Cleaning	Use a cleaner designed for high-quality painted surfaces. The cleaner must be wet, non-abrasive, without strong solvents, and have a pH value between 3 and 11 (neither strongly acidic nor strongly alkaline).		
-	Refer to Instruction Bulletin 6.5 'storage, handling, maintenance and removal of films and sheetings', for general maintenance and cleaning information.		
	>Instruction Bulletin 6.5 'Storage, Handling, Maintenan	nce and Removal of Films and Sheetings'<	
Important Safety Remark Application to glass	through thermal expansion of the glass. The local of by uneven heat absorption through sun exposure. safety glass, semi-tempered glass, etc.), glass dim the edge finishing, geographical orientation and pa factors. Light color designs and application on the applied framework of 4 mm around the entire win According to common knowledge a thermal crack (toughened safety glass), approx. 40°C (float glass usually under the framework in the embedded join darkest place in the format. Because of the many a	ss with sunlight exposure can lead to glass breakage conditions must be examined for the danger of glass break Type of glass (insulation glass, float glass, LSG, toughened ension, joint condition, flexibility of the sealant, quality of artial shadow during sun exposure are the determining outside of the window are to be preferred. A free non- dow front can help to dissipate the absorbed warmth. c can occur at temperature differences of approx. 130°C s) or approx. 110°C (semi-tempered glass). Coldest place is ned window part, the warmest place is typically on the above mentioned factors, glass breakage cannot be fully for glass breakage when using this film for window graphics.	
Remarks	This bulletin provides technical information only.		
Important notice	All questions of warranty and liability relating to this product are governed by the terms and conditions of the sale, subject, where applicable, to the prevailing law.		
	Before using, the user must determine the suitability of the product for its required or intended use, and the user assumes all risk and liability whatsoever in connection therewith.		
	As outdoor graphics age, natural weathering occurs causing a gradual reduction in gloss, slight color changes, some lifting of the graphic at the edges or around rivets, and ultimately a minor amount of cracking.		
	These changes are not evidence of product failure and are not covered by a 3M warranty.
